DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., In re Berg, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); In re Goodman, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); In re Longi, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); In re Van Ornum, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-6 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-8 of U.S. Patent No. 6,869,359. Although the conflicting claims are not identical, they are not patentably distinct from each other because the primary difference between the two sets of claims in the indicia used. The indicia used in a game are a matter of aesthetic design choice.

Drawings

3. New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because the drawings submitted are barely legible. Applicant is advised to employ the services of a competent patent draftsperson outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in

Art Unit: 3714

reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 1, 2, 4 & 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fey (Slot Machines. A Pictorial History of the First 100 Years) in view of Stern (US 2002/0074725).

Claims 1, 2, 4: Fey teaches the Mills 1929 Baseball Vender (page 167). The Baseball Vender is a gaming apparatus with a sports theme – i.e., baseball. There is a plurality of independently and randomly selected symbols disposed in a rectangular positional array. Each of the symbols of said plurality is directly related to a single predetermined sport. (See the reel strip along the side of the page.) The outcome of a gaming sequence using said display is a function of the symbols displayed along the payline. The player places a bet on the payline prior to the beginning of the game. Fey does not teach that the rectangular array comprises four rows and four columns of windows or a plurality of individually selectable paylines respectively intersecting four rows, four columns and two diagonals of four symbols displayed in the windows of said array. Stern teaches a rectangular array comprising four rows and four columns of windows or a plurality of individually selectable paylines respectively intersecting four rows, four columns and two diagonals of four symbols displayed in the windows of said array. Providing larger

Art Unit: 3714

arrays of symbols with multiple paylines is extremely well known to the art. This allows players to bet on more propositions, thus increasing the handle (i.e., the profits) on the gaming machine. It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified the Baseball Vender in view of Stern to include a rectangular array comprising four rows and four columns of windows or a plurality of individually selectable paylines respectively intersecting four rows, four columns and two diagonals of four symbols displayed in the windows of said array in order to provide more proposition upon which a player may bet, thus increasing profits. The existence of the game clearly implies the structure necessary to carry out the game.

Claim 5: Fey teaches enabling the gaming apparatus to play a bonus round of a gaming sequence in the event that a patron selects a predetermined payline, bets a predetermined amount of money on the payline, and receives a predetermined arrangement of predetermined symbols along the predetermined payline. A winning combination results in playing the bonus baseball game depicted on the front of the cabinet.

- 6. Claims 3 & 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fey in view of Stern as applied to claims 2 or 5 above, and further in view of Morro et al. (US Patent Number 6,162,121).
 - Claims 3 & 6: Fey and Stern teaches the invention substantially as claimed, but fails to teach a first, second and third display regions each of which include means for displaying a round of a predetermined table game thereon wherein the bonus round is a single play of one of three predetermined table games. Morro teaches a slot machine with a first, second and third display regions (i.e., 608A-C) each of which include means for

Art Unit: 3714

displaying a round of a predetermined table game thereon wherein the bonus round is a single play of one of three predetermined table games. Morro discloses that having three wheels allows the casino to offer larger jackpots that attract more players. (Col 2, 47-60) It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Fey and Stern in view of Morro to include a first, second and third display regions each of which include means for displaying a round of a predetermined table game thereon wherein the bonus round is a single play of one of three predetermined table games in order to allow the casino to offer larger jackpots thus attracting more players.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Baerlocher et al. (US Patent Number 6,413,162) teaches a square array of independent reels.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Corbett B. Coburn whose telephone number is (571) 272-4447. The examiner can normally be reached on 8-5:30, Monday-Friday, alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Scott Jones can be reached on (571) 272-4438. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
